

Rigging requirements:

distance crane bar to floor: 8,30 m

distance crane bar to ceiling: ca. 1m

distance trapeze to floor: 4,30 m

floor space centred under the trapeze: 16m x 4m

rigging points:

for crane bar: 2 x 2t at 9,30m or higher, around 1,5 m apart

for longe: 1 x 1t at 7 m or higher

for longe: 1 x 0.5t on floor, directly under 1t point

points for tensioning off crane bar: 4 x 1t

these rigging requirements are just rough guidelines, if these are fulfilled we can definitely do the act.

If not it might be possible but we need to have a closer look at it before in the venue.

We also own a structure that can be put up outdoors using stakes or weights. We also have all the legal TÜV papers.
